CN Benzamide, 2-[(2,1,3-benzothiadiazol-4-ylsulfonyl)amino]-4-fluoro-N-[1-(4-fluorophenyl)ethyl]-N-methyl- (9CI) (CA INDEX NAME)

AB Title [[(2,1,3-benzothiadiazol-4-yl)sulfonyl]amino]benzamides I [wherein R1, R2 = independently H, (cyclo)alkyl, (cyclo)alkenyl, alkynyl, naphthyl, benzoylalkyl, Ph, etc.; or NR1R2 = (un)substituted 10-oxa-4azatricyclo[5.2.1.02,6]dec-4-yl, heterocyclyl, 8-oxo-1,5,6,8-tetrahydro-2H-4H-1,5-methanopyrido[1,2-a][1,5]diazocin-3-yl; R1 = independently (cyclo)alkyl, alkenyl, Ph, furanyl, thienyl, benzyl, pyrrolyl, OH, alkoxy, SH, CN, NO2, NH2, halo, etc.; Rb = independently alkyl, halo; and enantiomers, diastereomers, hydrates, solvates, and pharmaceutically acceptable salts thereof] were prepared as cholecystokinin 2 (CCK2) receptor modulators. For example, 4-bromo-2-aminobenzoic acid piperidine amide (3-step preparation given) was coupled with 4-chlorosulfonyl-2,1,3benzothiadiazole in pyridine to afford II (74%). The latter showed binding to CCK2R specific zinc finger proteins fused with the herpes simplex virus VP16 activation domain with pKi of 7.6 and behaved as a competitive antagonist in a guinea pig gastric corpeal muscle assay with pKB of 8.8. Thus, I and their pharmaceutical compns. are useful for the treatment of CCK2 mediated conditions, such as pancreatic adenocarcinoma, pain, eating disorders, gastroesophageal reflux disease, gastroduodenal ulcers, reflux esophagitis, anxiety, colon cancer, peptic ulcers, pancreatic tumors, gastric tumors, Barrett's esophagus, antral G cell hyperplasia, pernicious anemia, and Zollinger-Ellison syndrome (no data).

AB The invention discloses a method for the identification of bacterial virulence-modifying agents, comprising depleting bacteria of a strain

comprising a luxAB construct of calcium ion; incubating the calcium ion-depleted bacterial with an agent the antibacterial effect of which shall be determined; recording the light emitted by the bacteria upon addition

of

an aldehyde, the incubation being carried out at a temperature which is at least

10° higher than the temperature at which the light is emitted by the bacteria, preferably at least 15° higher. The invention also discloses probes and the agents identified by the methodol. of the invention.

AB The present invention involves novel methods of using N-aryl-2-sulfonamidobenzamides as phosphate (Pi) transport inhibitors for the selective inhibition of Pi transport in the kidney and/or intestine as a therapeutic treatment in chronic renal failure and uremic bone disease and other related diseases. Preferably, inhibitors for use herein are those which selectively inhibit Na+-dependent Pi transport in tissues.

AB The results of preclin. trials of 28 new compds. of halogen-containing sulfonamidobenzamides with low toxicity are presented. Hymenolepidiasis models showed that the effectiveness of N-(2,5-dichlorophenyl)-2-[(3-nitro-4-chlorophenyl)sulfonylamino]-5-bromobenzamide was similar to that of niclosamide. In opisthorchiasis, 2 compds. were highly effective, and in trichocephaliasis, 5 compds. showed a high activity. Structure-activity aspects were evaluated.
